FINAL EXAMINATION

TRIMESTER 1, 2017/2018

PMT0301 – MATHEMATICS III

(All sections/ Groups)

16 OCTOBER 2017
2.30 p.m. – 4.30 p.m.
(2 Hours)

Question	Marks
1	/10
2	/10
3	/10
4	/10
Total	/40

INSTRUCTIONS TO STUDENTS

1. This question paper consists of **NINE** printed pages excluding cover page and statistical table.
2. Answer **ALL FOUR** questions. All questions carry equal marks and the distribution of the marks for each question is given.
3. Please write all your answers in the **QUESTION BOOKLET**. All necessary working steps **MUST** be shown.

Question 1

- a) Find the parametric equations of the line passing through the point $(2, -1, 3)$ and parallel to the line $\frac{1}{5}(x + 4) = y - 3 = -\frac{1}{2}z$. (2 marks)

- b) Find an equation of the plane which passes through $(1, -1, 2)$ and parallel to $2x - 5y + z = 3$. (2.5 marks)

c) Express $0.00\overline{25}$ as a fraction. Simplify your answer.

(2.5 marks)

d) Find the coefficient that contains x^3 in the expansion of $\left(\frac{1}{x} + 2x^2\right)^9$. (3 marks)

Question 2

- a) Given the following system of linear equations:

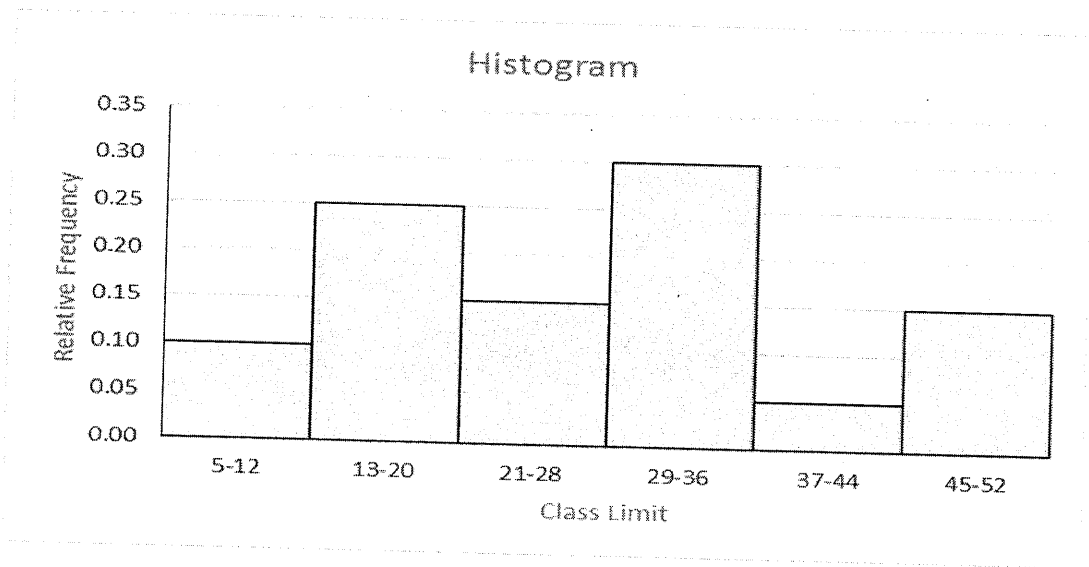

$$x - 2y + z = -4$$

$$-y + 3z = -7$$

$$x + 2y = 2$$

Find the inverse matrix by using its adjoint, and hence solve the system of linear equations by using inverse method. (5 marks)

- b) Below is the histogram for the time spent (in minutes) by a random sample of 40 students in MMU library.

- i) Based on the histogram, construct a frequency distribution table. (1 marks)

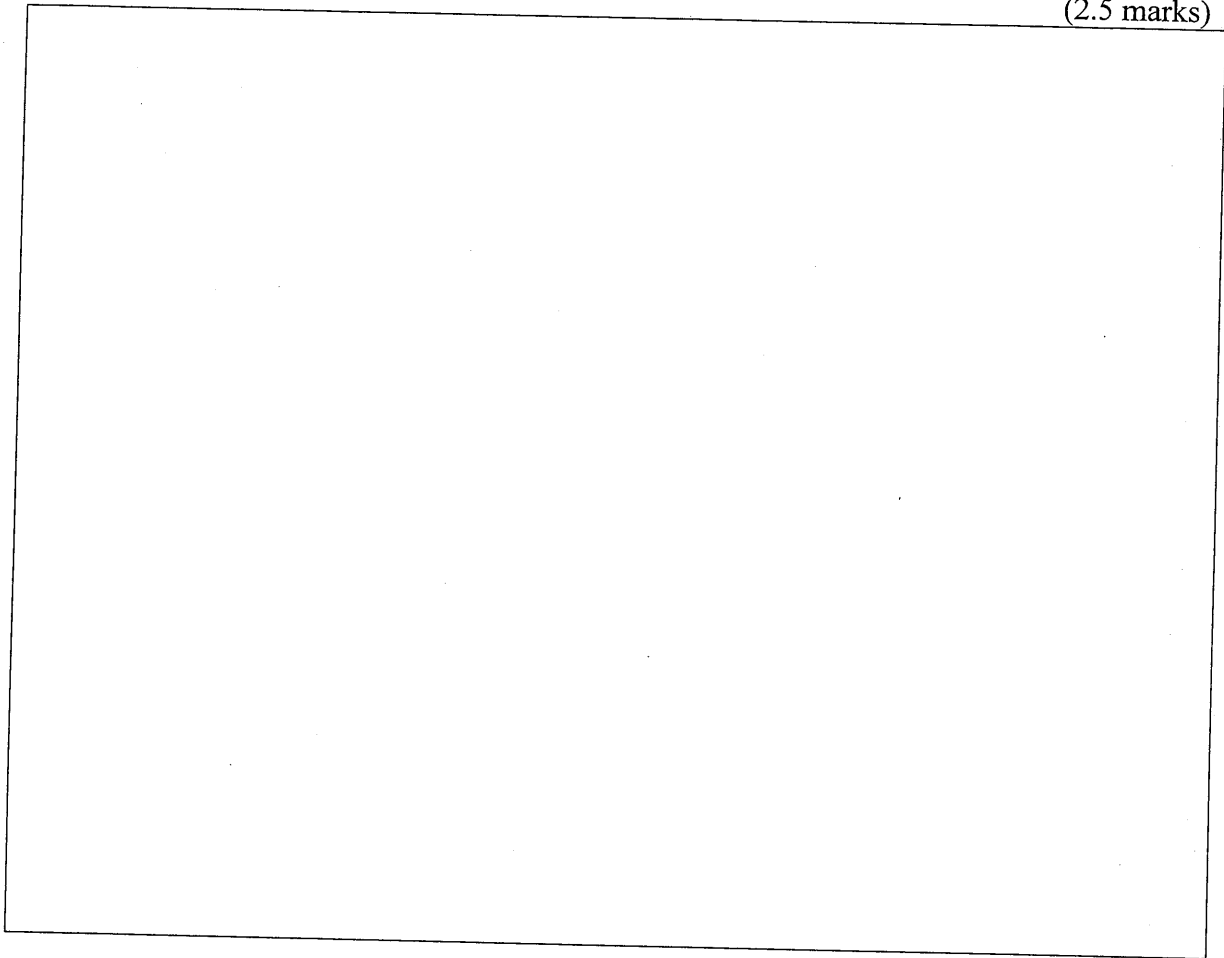

--

- ii) Calculate the mode. Give your answer correct to 1 decimal place. (1.5 marks)

--

iii) Calculate the standard deviation. Give your answer correct to 2 decimal places.

(2.5 marks)

Question 3

- a) An English lecturer wants to split a class of 10 students into three discussion groups. One group will have four students while the other two groups consist of three students each.

i) In how many ways can the lecturer form the groups? (1.5 marks)

- ii) The lecturer assigns one student as the group leader and another student as the secretary for each group. In how ways can the class be split? (1.5 marks)

- b) Given 12 bottles of beverages which contain 4 coffees and 8 teas. If five bottles are selected at random, find the probability that at least three are coffees. (2 marks)

- c) Table below shows a study between smoking and dementia among 1000 senior citizens:

	No Dementia	Dementia
Smoker	95	375
Non-smoker	480	50

- i) Suppose a person is selected at random from the study, find the probability that the person is a non-smoker or he/she has dementia. (1.5 marks)

- ii) Determine whether the events "Dementia" and "Smoking" are independent. (3.5 marks)

Question 4

a) You are offered to play a game in either one of the methods below:

Method A: 6 dice were thrown simultaneously. You will win if you get at least one dice with the number on the uppermost face is '6'.

Method B: 18 dice were thrown simultaneously. You will win if you get at least three dice with the number on the uppermost face is '6'.

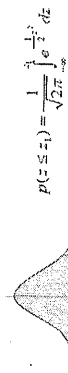

Assume all the dice are a fair dice. Which method would you choose to play? Explain your answer. (5 marks)

- b) The average number of landed properties sold by a real estate agent is 2 properties per week. Assume that the sales follow a Poisson distribution, find the probability that an agent will sell exactly three properties on two consecutive weeks. (2 marks)

- c) Suppose the number of games in which badminton players play is normally distributed with the mean of 150 games and variance of 900 games. How many percent of the players will play in more than 200 games? (3 marks)
